8.38 Mirror	45
8.38.1 QR Mirror	45
8.38.2 DM Mirror	45
Appendix 1: Digital Setting Code	46
Appendix 2: Cancel Barcode	47
Appendix 3: Code ID	48
Appendix 4: Character Comparison Table	49
Appendix 5: Supported Barcode Type	54
Appendix 6: Serial Port Instruction	55

1 Introduction of Module

1.1 Introduction

GM68 Bar code reader module is a high performance scanner, can read 1D bar code easily and read 2D bar code with high speed. It also wins high scan speed for linear code, even for bar code on paper or screen.

GM68 bar code reader module is an advanced bar code decoding algorithm which developed on image recognition algorithm, can easily and accurately read bar code, simplify secondary development.

1.2 Technical Specification

Scanning Performance	Scan Mode		640*480 CMOS
	Read Code Type	2D	QR Code, Data Matrix, PDF417,maxicode,Aztec,hanxin
		1D	EAN,UPC,Code 39,Code 93,Code 128,UCC/EAN 128, Codabar, Interleaved 2 of 5, Standard 25, MSI-Plessey GS1 Databar, Industrial 25, Matrix 2 of 5
	Accuracy of reading		One Dimensional Code:6mil
	Working Mode		Continuous Mode, Induction Mode, Manual Mode
	Depth of Field	Alipay	30-150mm
		Bus	50-120mm
	Contrast		≥25%
	Scanning angle		Intersection angle 360°, Elevation ± 55°, Deflection angle ± 55°
	Viewing Angle		Inclination 60°, Elevation 46°
Mechanical/ Electrical Parameters	Interface		TTL-232、 USB
	Dimension		30(W)×24(D)×7(H)mm
	Operating Current		≤100mA
Environmental Parameters	Operating Temperature		-20℃~+50℃
	Storage Temperature		-40℃~+70℃
	Operating Humidity		5%~95% (Non-Condensing)
	Environmental Light		0~100000LUX

1.3 Dimension (mm)

Front

Back

1.4 Definition

The pin definition of stamp holes:

PIN	Input/Output	Definition	Introductions
PIN 1	Output	Beep	sfn output, low level when free
PIN 2	Output	rLEDctrl	Positioning lamp control pin
PIN 3	Output	Dled	Decoding success light, low level when free
PIN 4	Output	wLEDctrl	Floodlight control pin
PIN 5	Output	Ntrig	Weak Pull-up, Low level trigger engine decoding
PIN 6	Ground	GND	Ground
PIN 7	Output	D+	USB : D+singal
PIN 8	Input	D-	USB : D-singal
PIN 9	Output	TX	Serial port send signal
PIN10	Input	RX	Serial port receiver signal
PIN11	Power	3V3	Input+3.3V
PIN12	Ground	GND	

The flat cable is 12PIN directly connected with FPC flexible line, with an interval of 0.5mm

PIN	Input/Output	Definition	Introductions
PIN 1	-	NC	Dangling
PIN 2	Power	VCC	Input+3.3V
PIN 3	Ground	GND	-
PIN 4	Input	RX	Serial port receiver signal
PIN 5	Output	TX	Serial port send signal
PIN 6	Input	D-	USB : D-singal
PIN 7	Output	D+	USB : D+singal
PIN 8	-	NC	-
PIN 9	Output	BEEPER	sfn output, low level when free
PIN10	Output	DLED	Decoding success light, low level when free
PIN11	-	NC	-
PIN12	Input	TRIG	Weak Pull-up, Low level trigger engine decoding

1.5 Reference Circuit

Trigger pin drive circuit:

sfm pin drive circuit:

DLED pin drive circuit

After the success of the decoding, the BEEPER and DLED pin will provide a high level pulse, the duration of high level pulse can be configured by scanning code by the user. The default is 60ms.

2 Factory Mode Information

2.1 Factory Default Configuration

Communication mode: USB KBW Continuous Mode Close: Enter(\r)

Factory default setting

2.2 Setup Code

*Setup code on

Off

3 Communication Interface

3.1 Serial Port

It's default and common to connect module and mainframe(such as PC, POS) by serial communication interface. Make sure communication parameter for module and mainframe are same, then it will communicate smooth and correctly. **Serial port related configuration: Baud rate:9600, Data bit:8, Verification: No, Stop bit:1**

TTL 232 Interface

3.1.1 Baud rate

1200bps

2400bps

4800bps

*9600bps(Default)

19200bps

38400bps

57600bps

115200bps

3.1.2 Parity Bit

Odd number

Even number

*No parity

3.1.3 Stop Bit

*1 bit stop bit

2 bit stop bit

3.1.4 Software Shake Hand

Forbid ACK/NAK

*Allow ACK/NAK

3.2 USB KBW

USB KBW Keyboard

3.3 USB COM Keyboard

USB COM

4 Read Mode

4.1 Manual Mode

4.1.1 Button Holding Mode

Set to button holding mode, press the button to trigger reading, and release the button to end reading. If the reading is successful or the reading time exceeds the single reading time, the reading will be finished.

Manual Mode- Button Holding

4.1.2 Button Trigger Mode

Set to the button trigger mode, press the button to start reading, release the button, read will not stop. If the reading is successful or the reading time exceeds the single reading time, the reading will be finished.

Manual Mode- Button Trigger

4.2 Continuous Mode(Default)

On this mode, reading module read code continuous and automatic. Read successfully or the reading time exceeds the single reading time,the reading will be finished,and automatically trigger the next reading.

***Continuous Mode**

4.2.1 Break Time Settlement

Time between two read.

Default:500ms, Unit:100ms, Range:0-9900ms

You can set the break time by scanning the bar code, example:

Set 0.5ms, first scan the bar code below. Then scan the “0” and “5” bar code in the Digital Setting Code (Appendix 1).

Break time settlement

4.3 Induction Mode

In automatic sensing mode, the reading engine detects the brightness of the surrounding environment. When the brightness changes, module will begin to read, read successfully or the reading time exceeds the single reading time,the reading will be finished. Regardless of the last read success or failure, the module will be redetects the brightness of the surrounding environment.

Induction Mode

4.3.1 Stable Induction Time

Stable time before entering the test environment. Default: 500ms, Unit:100ms, Range:0-9900ms

You can set the stable time by scanning the bar code, example:

Set 200ms,first scan the bar code below. Then scan the “0” and “2” bar code in the Digital Setting Code (Appendix 1).

Set 1500ms,first scan the bar code below. Then scan the “1” and “5” bar code in the Digital Setting Code (Appendix 1).

Stable Induction Time

4.3.2 Sensitivity Rating Setting

There are three levels of sensitivity to choose from, default: high sensitivity.

*High Sensitivity

Medium Sensitivity

Low Sensitivity

4.4 Host Mode

Through the instruction to trigger the reading engine, and it can end the reading by instruction, read successfully or the reading time exceeds the single reading time, the reading will be finished.

Host Mode

4.5 Single Scan Time

This parameter is the duration of a single decoding. Time from 0.5s to 25.5s, step size 0.1s. **Default 3s.** Example:

Set 0.5s, first scan the bar code below. Then scan the “0”, “0” and “5” bar code in the Digital Setting Code (Appendix 1).

Set 10.5s, first scan the bar code below. Then scan the “1”, “0” and “5” bar code in the Digital Setting Code (Appendix 1).

Single scan time

4.5.1 Single Scan Time Quickly Set Up

Infinite

3s

5s

10s

15s

20s

4.6 Time Interval For The Same Code Read

It means, after reading a barcode, refuse to read the same code for a set period of time. Only after a set period of time, it can be able to read and output. Default: 500ms, Unit:100ms, Range:0-9900ms.

Mainly for continuous mode and automatic induction mode.

Example: Set 0.5s, first scan the bar code below. Then scan the “0” and “5” bar code in the Digital Setting Code (Appendix 1).

Time Interval For The Same Code Read

4.6.1 Same Code Quickly Set Up

No delay

Delay 1s

Delay 3s

Delay 5s

Delay 7s

Infinite delay

5 Lighting and Collimate

5.1 Lighting

Head lamp is used to additional lighting when read.

*The light turn on only when read
(Default)

Always on

Always off

5.2 Collimation

There will be a pointing light beam which can help user to find best distance.

Note: Flashing and non-flashing functions only work if the collimation LED is set to be **Always on** or **on when read**. After the LED is set to be off, if you want to set the LED flashing function, please first set the collimation LED to be **Always on** or **on when reading**.

*The light turn on only when read
(Default)

Always on

Always off

Flashing

Non-Flashing

6 Prompts

6.1 Keyboard

6.1.1 Keyboard Settlement

Scan following code to change keyboard.

*American English(Default)

Belgium

Finland

Austria,Germany

France

Italy

Sweden

UK

Denmark

Spain

Norway

Portugal

Turkey F

Turkey Q

Japan

Russia

Czech

Thailand

Ukraine

Brazil(ABNT2)

Greek

Hungary

Netherlands

Poland(214)

Romania (standard)

Slovakia

Multi-country General

6.1.2 Keyboard Type

After enabling the virtual keyboard, you can output the correct data in any keyboard language mode.

When using virtual keyboard, you must make sure the keypad number keys are valid.

*Standard Keyboard

Virtual Keyboard

6.1.3 Keyboard Output Character Time Interval

Time from 0ms to 1000ms Unit: 5ms Default: 5ms

0ms

10ms

6.1.4 ASCII Control Character Output Mode Selection

Control character (0x00-0x20) output mode selection in ASCII code

Output function keys: control characters are used as custom function keys. See appendix 4 for specific functions

Output Ctrl combination key (this function is used with prefix and suffix) : Ctrl combination key output control characters, specific functions are shown in appendix 4

ALT output control characters: full control character output is supported in Chinese environment, refer to standard ASCII table for details

Output Enter and DownArrow: mask other control characters, output only: 0x07 output Enter, 0x0A output DownArrow, 0x0D output Enter.

Output function keys(0x00)

Output Ctrl combination key(0x01)

ALT output control characters(0x02)

Output Enter and DownArrow(0x03)

6.2 Prompts Tone

6.2.1 Buzzer Type

*Passive Buzzer

Active Buzzer

6.2.2 Silent Mode

Close All Prompts

*Forbid to Close All Prompts

6.2.3 Volume Level

Default: high pitch

*High Pitch

Middle

Low

6.2.4 Decoding Successful Prompt Tone

*Decoding Successful Prompt Tone ON

Decoding Successful Prompt Tone OFF

6.2.5 Starting Up Prompt

***Starting Up Prompt ON**

Starting Up Prompt OFF

6.2.6 Setup Code Prompt

***Setup Code Prompt ON**

Setup Code Prompt OFF

6.3 Decoding Successful Prompt Light

Decoding success prompt light on a certain time, the premise is that the prompt light is used as a decoding prompt.

Forbid

***Allow**

6.4 Decoding Prompt Working Mode

***Power on Always off**

Power on Always on

6.5 Decoding Prompt

If the barcode cannot be decoded within the timeout period before releasing the trigger button, it is allowed to send "unread" messages. Any possible prefix or suffix can be attached to this message.

When this function is disabled, no message can be sent to the host even if the barcode cannot be decoded.

***Forbid sending NR**

Allow sending NR

6.6 Keyboard Output Force Letter Case Conversion

Example: If the barcode is ab123dE, if scan the "convert to uppercase" bar code, the output is AB123DE; if scan the "convert to lowercase" bar code, the output is abc123de.

Default: Keyboard case is not converted.

***Keyboard case is not converted**

All uppercase

All lowercase

Case reversal

6.7 Output Data Code Format

Read following to print Chinese data according to specified code format

0: Original type 1:GBK format: notepad, EXCEL

2: UNICODE format: WORD and input box for chat tools

Original Type

***GBK**

Unicode

6.8 Input Data Code Format

***AUTO**
(0x00)

GBK(GB2312)
(0x01)

UTF8
(0x02)

ASCII
(0x03)

Japanese

DEC Multinational Character Set(MCS)

Japanese single byte

7 Data Edition

7.1 CODE ID

Users can identify different types of bar code by CODE ID.

CODE ID use one character to identify and can be self- defined. Pls see the Appendix 3.

***Not allowed to send ID**

Allowed to send ID

7.2 Terminator Character

Terminator character is add character format after decoding data: decoded data + terminator character.

***No Terminator**

#&CR LF

%CR

TAB

CR CR

CR LF CR LF

7.3 Add Prefix and Suffix

7.3.1 Prefix

- 1) Scan "Set Multiple Prefixes" setting code

Set Multiple Prefixes in succession

- 2) Scan the digital setting code in turn, and there will be a successful tone for every four
- 3) Scan "Finish Setting Multiple Prefixes Suffixes" setting code and finish setting

Finish Setting Multiple Prefixes Suffixes

7.3.2 Suffix(Similar to a prefix, you can add a newline to suffix if you need a newline)

- 1) Scan "Set Multiple Suffixes" setting code

Set Multiple Suffixes in succession

- 2) Set Suffixes
- 3) Scan "Finish Setting Multiple Prefixes Suffixes" setting code and finish setting

Finish Setting Multiple Prefixes Suffixes

7.3.3 Prefix Suffix Take Effect

*Only output the decoded data

Output multiple Suffixes

Output multiple Prefixes

Output multiple Prefixes and Suffixes

7.4 Hide Header, Middle and Tail Characters

7.4.1 Hide Header Characters

Decoding data for header data hiding, it can be configured to hide any length.

If the configured length exceeds the barcode data length, all contents of the current barcode are hidden

*Forbid

Allow

Set the number of Hide Header Characters

Set the number of Hide Header Characters, ranging from 1 to 255.

Scan the follow barcode and then scan the digital setting code. For example, if 16 characters need to be hidden, then scan the digital setting code sequentially: 0, 1 and 6.

The number of Hide Header Characters

7.4.2 Hide Middle Characters

Decoding data for middle data hiding, and any starting position and length can be configured.

If the starting position of the configuration exceeds the barcode data length, the current barcode is not hidden.

If the configured length exceeds the remaining barcode data length, all barcode data after the start location is hidden.

***Forbid**

Follow

Sets the Start Location of Hide Middle Characters

Sets the start location of hide middle characters, ranging from 1 to 255.

Scan the follow barcode and then scan the digital setting code. For example, if you need to hide data after the third character (starting with the fourth character), scan the digital setting code successively: 0 0 3.

The start bit of Hide Middle Characters

Sets the Length of Hide Middle Characters

Sets the length of hide middle characters, ranging from 1 to 255.

Scan the follow barcode and then scan the digital setting code. For example, if 16 characters need to be hidden, then scan the digital setting code sequentially: 0, 1 and 6.

The Length of Hide Middle Characters

7.4.3 Hide Tail Characters

Decoding data for tail data hiding, it can be configured to hide any length.

If the configured length exceeds the barcode data length, all contents of the current barcode are hidden.

***Forbid**

Follow

Set the number of Tail Header Characters

Set the number of Tail Header Characters, ranging from 1 to 255.

Scan the follow barcode and then scan the digital setting code. For example, if 16 characters need to be hidden, then scan the digital setting code sequentially: 0, 1 and 6.

The number of Tail Header Characters

7.5 Set STX and ETX

Forbid

STX Prefix

ETX Suffix 1

STX(Prefix)+ETX(Suffix 1)

7.6 Any Character Replacement Function

This function can replace any character in barcode data with another character, supporting data number 1:1 or 1:n replacement, such as the replacement of A--B, A--BC, A--BCD...

Operation brief Description:

7.6.1 First scan "Set the Replaced Object"

Set the Replaced Object

For example: Separator GS, corresponding digital setting code is 1029, respectively scan 1,0,2,9

7.6.2 Scan "Set Replacement Data"

Set Replacement Data

For example: Symbol }, corresponding digital setting code is 1125, respectively scan 1,1,2,5

7.6.3 Complete Setting

Complete Setting

7.6.4 Scan "Allow Data Replacement" to Enable the Replacement Function

Allow Replacement

Forbid Replacement

8.19.2 Interleaved 2 of 5 Identify Length

Users can set to decode Interleaved 2 of 5 within a certain length range.

Example:Set to decode only Interleaved 2 of 5 within 4-20 bit length range.

First scan the bar code below, and then scan 0,4,2,0 bar code in Appendix 1 in sequence. Change the selection or cancel an incorrect input setting, scan the bar code in Appendix 2.

Industrial 2 of 5 within a certain length range

Industrial 2 of 5 in any length range

Appendix 6: Serial Port Instruction

When the scanner is not working, it is in sleep mode. Under the sleep mode, need to wake up first, then send the effective command. (Wake up command: 0x00, 50ms, then send the effective command)

To start decoding and stop decoding the serial port command needs to be valid in host mode. Please switch to the host mode first.
